

LAB 5 QUIZ

The quiz is on materialized views.

PostgreSQL supports materialized views, see

<https://www.postgresql.org/docs/9.6/rules-materializedviews.html>.

1. Use this feature of postgresql to create a materialized view DeptStdCount which will have only two columns : department name and total no of students in that department.

After creating this m-view, use it to query to obtain no of students in the department having largest no of students (output will be department name and no of students in it).

Write SQL query on base tables to check if this answer is correct !
